

Minnesota's Pyramid Addition Adventure

Minnesota Muskrat has just returned from an exciting adventure to the pyramids in Egypt. While he was there, he found some mysterious hieroglyphics. Minnesota needs your help solving these ancient problems that have baffled people for centuries.

To fill in the missing numbers on Pyramid ①, add each pair of adjacent numbers together and write their sum in the block above them. Continue adding until you reach the top block. Minnesota has done the first row in Pyramid ① for you!

38	124	1	8	7	10	
55		9	15			
241	3	2	4	0	8	16
10		9	2	24	3	
31			19		3	
62	5	10	31	3	15	5

In Pyramids ②-④, several of the numbers on the blocks are missing. First, use your addition and subtraction skills to fill in the missing numbers. Then, use them to fill in the letter that matches the number in Minnesota's word balloon. (Letters may have different numbers associated with them.) He has a special message just for you!
